PROJECT: Beach Erosion Control, Luna Pier, MI

DESCRIPTION: The proposed project includes remediating the problems with the existing breakwater sills along the Luna Pier shoreline and remediating a leaning floodwall as needed to provide adequate flood protection. Operation Foresight Program of 1973 and the Advance Measures Flood Control Program of 1986, has provided the City of Luna Pier with various forms of flood protection. In 1984, the City of Luna Pier decided to construct their own supplemental flood protection works, and hired a private firm to design and construct a cellular concrete nearshore floodwall and an offshore breakwater. The offshore breakwater and a section of shoreline floodwall now need remediation. Since the remediation would be to non-Corps structures and technically be under the local sponsor's Operations, Maintenance, Repair, Replacement and Rehabilitation provision for such projects, the Corps has no authority to provide such remediation.
